

TrackerSense

HELIKO B.V.

Track anything, anytime, anywhere

Track valuable packages every step of the way
for complete peace of mind.

Know more about your packages than ever before with TrackerSense

Just being able to track something, wherever it is in the world, and see where it moves in real time seemed beyond everyone's reach only a few years ago. Today that seems straightforward with GPS trackers which are able to switch to land based systems using mobile phone masts and providing pretty much global cover. TrackerSense tracked camels in the Gulf, film rushes in Namibia, daily deliveries across the Atlantic and Amazon orders cross-border in Europe.

But clients have responded with a whole set of additional challenges. In pharmaceuticals regulations require temperature sensing; in electronics, humidity can be critical and everyone demands security.

TrackerSense 365 can detect temperature, humidity, pressure, light levels and even acceleration. Simply using the light sensor shows where a package has been opened on its journey - hopefully when it's in the customer's hand.

Big data & leading edge GPS technology combined
in a revolutionary design.

Why TrackerSense?

GPS and LBS technology

The latest GPS and LBS (Land Based Services) technology take TrackerSense products beyond the traditional point-to-point track and trace solutions.

Configurable alerts

Parameters and email alerts are configurable via the web portal for events such as breach of temperature range or shock levels.

High resolution accuracy

With resolution down to 6 metres, our product offers real-time tracking and sensing anywhere in the world to accurately track delivery.

Intuitive web portal

The TrackerSense web portal shows tracking history, current location and environmental data of shipments enabling full tracing capability.

Affordable

Our low cost GPS tracking solutions enable you to protect important assets for complete peace of mind with no monthly fee.

No infrastructure required

Effortlessly track your packages with no additional infrastructure or maintenance required.

Easily track your packages throughout your distribution network.

Benefits of TrackerSense

POSITION - Track the current location of your shipment in real-time with an accuracy of up to 6 metres.

LIGHT EXPOSURE * - Identify if a package has been opened with a light exposure reading.

TEMPERATURE * - Receive an alert if there has been a breach of a pre-defined temperature range on the shipment.

HUMIDITY * - Prevent damage to goods due to moisture with the humidity sensor.

PRESSURE * - Track the pressure levels within your shipment and receive alerts if a pre-defined range is breached.

SHOCK * - Quickly establish if your package has been dropped or damaged using our shock sensor technology.

AIRPLANE MODE * - Based on the pressure sensor TrackerSense recognizes transport by airplane.

LONG BATTERY LIFE - The device is capable up to 42+ days battery life and available in single-use or rechargeable options.

* TrackerSense Ultra

Our leading edge technology and revolutionary design allow you to track anything in real-time, anywhere in the world, straight from the web.

How to use TrackerSense

Step 1:
Order TrackerSense at
Heliko B.V..

Step 2:
Charge TrackerSense 24h.

Step 3:
Login to your
account.

Step 4:
Set alarms.

Step 5:
Start TrackerSense and
add it to the package.

Step 6:
Track & trace your
shipment.

TrackerSense Lite

Our TrackerSense Lite range is designed to be an easy-to-use solution at a low all-inclusive price. Designed for environments where only tracking is required and available in single-use or reusable versions.

TrackerSense Ultra

Our TrackerSense Ultra range gives location and sensor based logistics for your shipment in real-time, anywhere in the world, straight from the web. Parameters and alerts may be customised by you to suit individual needs. Available in single-use or reusable versions.

Profiles:

	TrackerSense 1	TrackerSense 365
15D Lite	TS1-15D-L	TS365-15D-L
15D Ultra	TS1-15D-U	TS365-15D-U
42D Lite	TS1-42D-L	TS365-42D-L
42D Ultra	TS1-42D-U	TS365-42D-U

TrackerSense offers a range of fixed profiles where 15 days (air, road) or 42 days (sea) monitoring can be set. For example:
 TS1-42D-L means TrackerSense single-use with a set-up for 42 days of monitoring tracking only.
 TS365-15D-U means TrackerSense multi-use with a set-up for 15 days of monitoring tracking, temperature, air pressure light and shock.

Specifications of TrackerSense Lite & Ultra:

Length mm: 125
 Width mm: 65
 Height mm: 15
 Weight gr: 80
 Position: 22 satellite channels
 Communication: GPS and GSM network
 Battery: 3.7V 1200 mA
 Measuring range: -40°C to + 85°C
 Accuracy: +-1°C

Lost shipments can cost your company a fortune each year.
TrackerSense helps to prevent these losses.
